

Project 1 - Tips

1. How many spaces do you need to print in each row before the first character of the diamond? You need to figure out the pattern of spaces and symbols to print in order to make the diamond.

Row 0 →				B			
Row 1 →			B	B	B		
Row 2 →		B	B	B	B	B	
⋮	B	B	B	B	B	B	B
		B	B	B	B	B	
			B	B	B		
				B			

2. Don't forget you can combine strings by adding them: `"try" + "this" + " out !"`. You can also repeat a string if you multiply it by a number.
3. A string can be all blank spaces like this: `" "` or this: `" "`.
4. To print a string without starting a new line, use the optional `end = ""` argument:

```
print("any string", end = "")
```

5. Would it be helpful to use more than one for-loop for different parts of the diamond?
