

Tracing Loops

COMS 261

Trace the following loops by making a table with columns for each variable. Keep track of how the variables change. You should also keep track of what output gets printed.

1.

```
### Nested Loop ###  
for i in range(3):  
    for j in range(2):  
        print(10 * i + j)
```

2.

```
### Even vs. Odd ###  
x = 1  
total = 0  
while x < 6:  
    if x % 2 == 0:  
        total = total + x  
    else:  
        total = total - 1  
    x = x + 1  
print(total)
```
